

In your own words, explain Django static files and how Django handles them.

Static files are hardcoded in by developers, user generated media resides in a different place. Static files include images, css and javascript files that will not change. They are stored in a “static” folder.

Look up the following two Django packages on Django’s official documentation and/or other trusted sources. Write a brief description of each.

Package	Description
ListView	Generic display view that is used to display a list of objects
DetailView	Generic display view that is intended to display details of a single object

You’re now more than halfway through Achievement 2! Take a moment to reflect on your learning in the course so far. How is it going? What’s something you’re proud of so far? Is there something you’re struggling with? What do you need more practice with? You can use these notes to guide your next mentor call.

So far I am glad that this achievement is going smoothly and i feel i have a good understanding of how Django is working. I do wish to be able to make changes and setup urls without having to look at my notes to remember the step to do so, but I know this will come with time.
